A brief Concept note

Gender sensitization is defined as the process of changing the stereotypical opinions, attitudes and mindset of society surrounding gender, which usually discriminates women. Hence, the aim of Human Rights and gender sensitization is to build a universal culture of human rights through imparting knowledge and skills, and the molding of attitudes.

Gender sensitization is the need of the hour as it increases the sensitivity of people at large towards women and their problems. This process creates a ripple effect at various levels, be it at the level of policy making or with the public at the grass root level. This leads to the problem getting addressed, making it a matter of priority.

The important role of the youth in this matter needs to be emphasized by creating awareness and creating a platform for them to actively participate in this endeavor.

Objectives

- To create awareness about gender issues fostering an environment of gender justice.
- To promote a gender sensitive attitude at work place.
